IN THE CLAIMS:

1. (original) A high-stretch elastic laminate, comprising:
 a) one or more necked nonwoven webs having a plurality of perforations; and an elastic film substantially devoid of perforations bonded to the one or more necked, perforated nonwoven webs.

- 2. (original) The high-stretch elastic laminate of Claim 1, wherein the nonwoven web is a spunbond nonwoven web.
- 3. (original) The high-stretch elastic laminate of Claim 1, wherein the perforations of the nonwoven web extend in the cross direction.
- 4. (original) The high-stretch elastic laminate of Claim 1, wherein the perforations of the nonwoven web extend in the machine direction.
- 5. (original) The high-stretch elastic laminate of Claim 1, wherein the nonwoven web is perforated before being necked.
- 6. (original) The high-stretch elastic laminate of Claim 1, wherein the nonwoven web is perforated after being necked.

KCC-1164 2 RWN/pc

7. (original) The high-stretch elastic laminate of Claim 1, wherein the nonwoven web is selectively perforated in some regions and left un-perforated in other regions.

- 8. (original) The high-stretch elastic laminate of Claim 1 wherein the elastic film is an elastomeric block copolymer film.
- 9. (original) The high-stretch elastic laminate of Claim 1 wherein the laminate is one of a stretch bonded laminate, a neck bonded laminate, a necked stretch bonded laminate, or a creped nonwoven/elastic film laminate.
- 10. (previously presented) A method of making a high-stretch elastic laminate of a necked nonwoven web and an elastic film substantially devoid of perforations, comprising:
 - a) necking a nonwoven web
 - b) placing a plurality of perforations in the nonwoven web; and
- c) bonding an elastic film substantially devoid of perforations to the necked and perforated nonwoven web.
- 11. (original) The method of making a high-stretch elastic laminate of Claim 10, wherein the nonwoven web is a spunbond nonwoven web.
- 12. (original) The method of making a high-stretch elastic laminate of Claim 10, wherein the perforations of the nonwoven web extend in the cross direction.

KCC-1164 3 RWN/pc

13. (original) The method of making a high-stretch elastic laminate of Claim 10, wherein the perforations of the nonwoven web extend in the machine direction.

- 14. (original) The method of making a high-stretch elastic laminate of Claim 10, wherein the nonwoven web is perforated before being necked.
- 15. (original) The method of making a high-stretch elastic laminate of Claim 10, wherein the nonwoven web is perforated after being necked.
- 16. (currently amended) The <u>method of making a high-stretch</u> elastic laminate of Claim 10, wherein the nonwoven web is selectively perforated in some regions and left un-perforated in other regions.
- 17. (original) The method of making a high-stretch elastic laminate of Claim
 10 wherein the elastic film is an elastomeric block copolymer film.
- 18. (original) The method of making a high-stretch elastic laminate of Claim 10 wherein the laminate is made as one of a stretch bonded laminate, a necked stretch bonded laminate, or a creped nonwoven/elastic film laminate.
- 19. (original) A side panel for a personal care garment made from the highstretch elastic laminate of Claim 1.

KCC-1164 4 RWN/pc

20. (original) A side panel for a personal care garment made according to the method of Claim 10.

21. (canceled)
